**Movie Night Set Up**

**Step One**
Connect the Speaker and Blu-Ray Player to the Projector. The Aux cord should be plugged into the Speaker input on the projector.

**Step Two**
Connect the longer Side poles with the joints to make TWO squares that you can then put together by connecting with the Middle piece.

**Step Three**
Connect three of the Bottom pieces together to make the legs. They should look like an upside down “T”. You should have TWO legs that connect with two of the joints on the Side pieces.

**Step Four**
After the legs are connected, you should be able to stand the frame of the projector screen up by turning the legs so that they are pointed forward.

**Step Five**
Next is the attachment of the screen itself. First you need to thread a bungie through the holes on the outer border of the screen. Then wrap the bungie around one of the poles on the frame. Start with the four on the sides, and then move onto the top and bottom ones if it isn’t tight enough.

Make sure the screen is about 10-12 feet from the projector. Also, make sure that the volume is up on the speaker and the projector. If you prefer to hang the screen on a wall, deck, fence, between some trees, etc., feel free!
